

Microsoft Entra ID Configuration Guide

Gemini Enterprise Office 365 Add-in (PowerPoint, Word, Excel, Outlook)

ADMIN SETUP GUIDE

Purpose: This guide outlines the steps required for a Microsoft Entra ID (Azure AD) administrator to register and expose the API for the Gemini Enterprise Office 365 Add-in to enable seamless Single Sign-On (SSO).

1 Create App Registration

1. Sign in to the **Microsoft Entra admin center** (entra.microsoft.com).
2. Navigate to **Identity > Applications > App registrations**.
3. Click **+ New registration**.
4. **Name:** Gemini Enterprise Office Add-in
5. **Supported account types:** Select **Accounts in this organizational directory only (Single tenant)**.
6. **Redirect URI:** Leave blank.
7. Click **Register**.

2 Set the Application ID URI

Office 365 SSO strictly requires the Application ID URI to match the hosting backend domain.

1. In the left navigation menu, select **Expose an API**.
2. Next to **Application ID URI**, click **Set** (or **Edit**).
3. Enter the URI in the following exact format:

```
api://gemini-frontend-16933400417.us-central1.run.app/<APPLICATION_CLIENT_ID>
```

(Replace `<APPLICATION_CLIENT_ID>` with the Application (client) ID from Step 1).

4. Click **Save**.

3 Define the `access_as_user` Scope

1. Still on the **Expose an API** page, click **+ Add a scope**.
2. **Scope name:** `access_as_user`
3. **Who can consent:** Admins and users
4. **Admin consent display name:** Access Gemini Enterprise as user
5. **Admin consent description:** Allows Office add-in to authenticate the signed-in user against Gemini Enterprise.
6. **State:** Enabled
7. Click **Add scope**.

4 Pre-Authorize Microsoft Office Clients

Pre-authorizing Microsoft client IDs allows silent SSO without repeated consent popups for users.

1. Still on the **Expose an API** page, scroll to **Authorized client applications**.
2. Click **+ Add a client application** and add the two authorized Office clients:

Application / Client Type	Client Application ID (GUID)	Authorized Scopes
Office on the Web	ea5a67f6-b6f3-4338-b240-c655ddc3cc8e	Check ☐ access_as_user
Modern Office Desktop / PowerPoint / Outlook	bc59ab01-8403-45c6-8796-ac3ef710b3e3	Check ☐ access_as_user

5 Enable v2.0 Access Tokens

1. In the left navigation menu, select **Manifest**.
2. Locate the `"accessTokenAcceptedVersion"` property (or `"requestedAccessTokenVersion"` under `"api"`).
3. Change its value from `null` or `1` to `2`.
4. Click **Save**.

6 Configure Token Claims

1. In the left navigation menu, select **Token configuration**.
2. Click **+ Add optional claim**.
3. Select **Access** as the token type.
4. Select the check boxes for: `email`, `upn`, and `preferred_username`.
5. Click **Add** (accept any Microsoft Graph permission prompt).

7 API Permissions & Admin Consent

1. In the left navigation menu, select **API permissions**.
2. Ensure `User.Read`, `openid`, `profile`, and `email` are present under Microsoft Graph.
3. Click **Grant admin consent for <Your Organization>** and confirm.

Information Required from Administrator

Once completed, please reply with the following values from the App Registration **Overview** page:

- **Application (client) ID:** `<e.g. 74a2fdc6-7d78-4ffa-99be-e70e2eab33a0>`
- **Directory (tenant) ID:** `<e.g. 464c0986-459d-42b9-a68d-aff41ccd3b16>`
